
P2: cousin delay, 500 random teachers
δ = 0.01
δ = 0.003
δ = 0.001
prediction
measured cousin delay × δ²
predicted cousin delay × δ²
P3 as written: dotted slope (1 − x)/x misses c₄
c₂ after c₁
c₄ after c₃
sibling delay
log(1/δ)
Refined after the miss, x ≤ 0.8 (not a prediction)
first group, n = 352
second group, n = 396
measured slope in log(1/δ)
(1 − x) / (s_sib √(s_top a))
P5: escape laws, δ = 10⁻³
c₃, cousin
4√a s₃√c₃
c₂, sibling
2 a q² s₂
dlog c_k/dt
c_k
