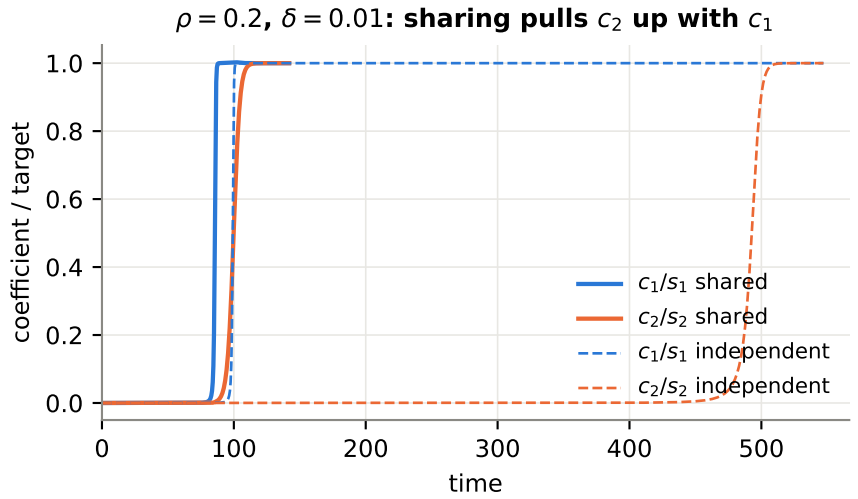
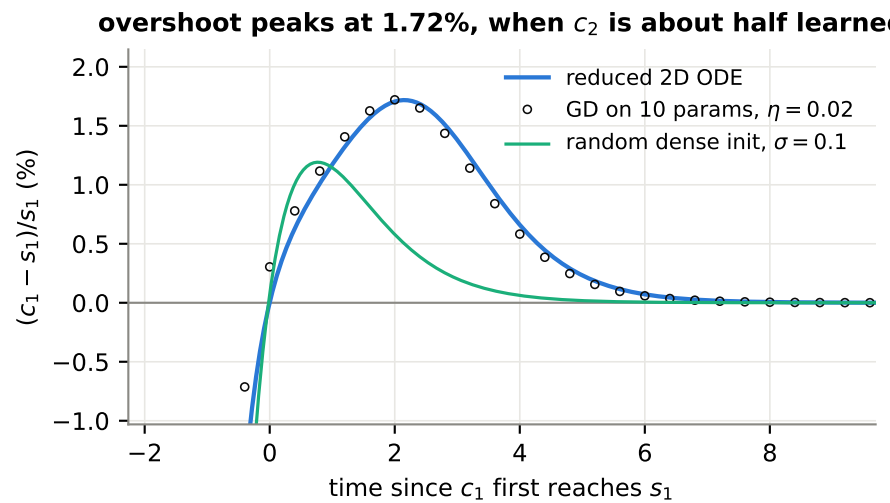
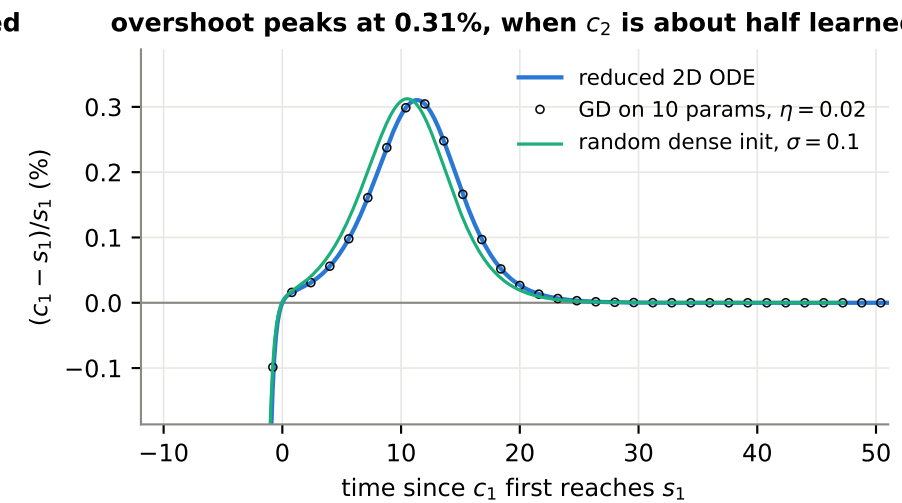
$\rho = 0.5$, $\delta = 0.01$: sharing pulls c_2 up with c_1
coefficient / target
time
c_1/s_1 shared
c_2/s_2 shared
c_1/s_1 independent
c_2/s_2 independent



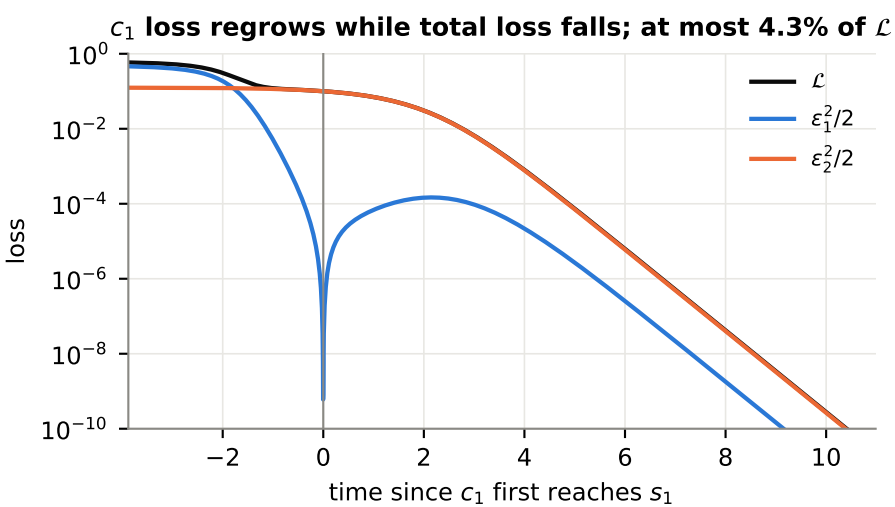
$\rho = 0.2$, $\delta = 0.01$: sharing pulls c_2 up with c_1
coefficient / target
time
c_1/s_1 shared
c_2/s_2 shared
c_1/s_1 independent
c_2/s_2 independent



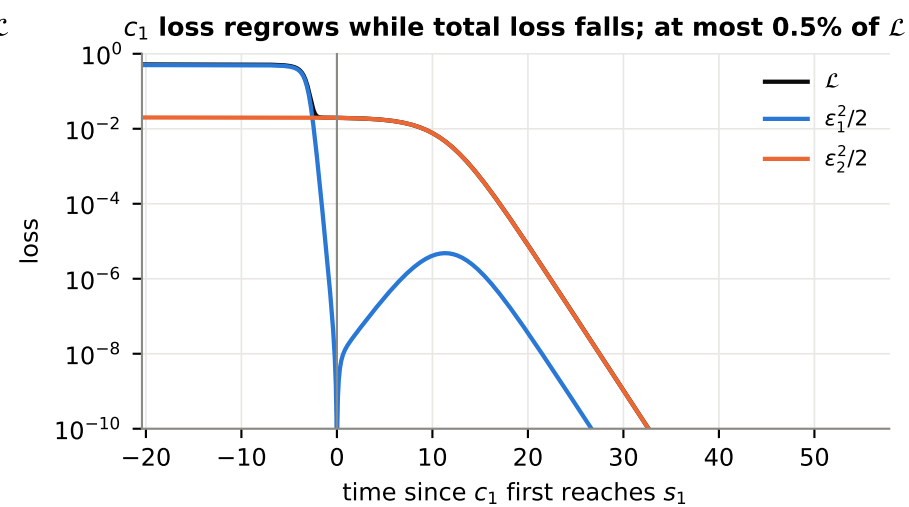
overshoot peaks at 1.72%, when c_2 is about half learned
$(c_1 - s_1)/s_1$ (%)
time since c_1 first reaches s_1
reduced 2D ODE
GD on 10 params, $\eta = 0.02$
random dense init, $\sigma = 0.1$



overshoot peaks at 0.31%, when c_2 is about half learned
$(c_1 - s_1)/s_1$ (%)
time since c_1 first reaches s_1
reduced 2D ODE
GD on 10 params, $\eta = 0.02$
random dense init, $\sigma = 0.1$



c_1 loss regrows while total loss falls; at most 4.3% of $\mathcal{L}$
loss
time since c_1 first reaches s_1
$\mathcal{L}$
$\varepsilon_1^2/2$
$\varepsilon_2^2/2$



c_1 loss regrows while total loss falls; at most 0.5% of $\mathcal{L}$
loss
time since c_1 first reaches s_1
$\mathcal{L}$
$\varepsilon_1^2/2$
$\varepsilon_2^2/2$
